# A software toolset for quick humanoid motion prototyping

Fabio DallaLibera\*, Takashi Minato†, Hiroshi Ishiguro†‡,

Enrico Pagello\*, Emanuele Menegatti\*

\* DEI, Padua University, Italy

† JST ERATO, Osaka, Japan

‡ Dept. of System Innovation, Osaka University, Japan

## Background

### Mobile robots

player/stage is used by many research groups

### Humanoid robots

Many powerful simulators and related projects available

- SimSpark
- USARSim
- Gazebo
- Simbad
- SimRobot
- Webots
- PAL
- ...

None imposes over the others

No time to learn how to use complex software

Many researchers directly use physical simulation libraries (e.g. ODE)

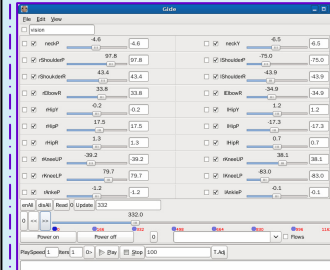

Often researchers need fast prototyping ability to understand and modify the code to meet specific needs

Much time wasted in implementing similar things

Realize a software toolset for humanoid motion development fully understandable in limited time

## Features

Gtkmm motion development interface

communication through text messages over TCP-IP

Same interfaces for the real and simulated robot

Motor  
rotate(double\*)  
setPower(bool\*)

storage as simple text files

Multi-robot simulation

Fast kinematic chain modeling using XML files

Easily customizable environment

simulation of robot sensors (camera, touch)

built in interaction with the simulated objects

## Examples of usage

• **Study of touch instructions** F. DallaLibera, T. Minato, I. Fasel, H. Ishiguro, E. Pagello and E. Menegatti, A new paradigm of humanoid robot motion programming based on touch interpretation, RAS, Vol. 57, No 8, pp.846-859, 2009

• **Programming of CPGs by touch** F. Dalla Libera, T. Minato, H. Ishiguro and E. Menegatti, Direct Programming of a Central Pattern Generator for Periodic Motions by Touching, RAS, Special Issue on Advances in Autonomous Robots for Service and Entertainment, 2009

• **JEAP RoboCup team**
